DETAILED ACTION

Claims 1-19 are present within the examination

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 15-19, drawn to programmable MDIO pads on a transceiver, classified in class 370, subclass 366.
- II. Claim 1-14, drawn to a bit error rate tester (BERT), classified in class 714, subclass 704.

The inventions are distinct, each from the other because of the following reasons:

Inventions programmable MDIO pads on a transceiver (I) and BERT (II) are related as combination (I) and subcombination (II). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (I) as claimed does not require the particulars of the subcombination as claimed because the combination does not require the BERT. The subcombination has separate utility such as Bit error rate testing with the use of the BERT.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all

the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
